

Contents

1. What is Nuclear Medicine?	1
2. Radionuclide Production	10
3. Radiopharmaceuticals	18
4. Instruments in Nuclear Medicine	41
5. Neutron Activation Analysis	65
6. Autoradiography	72
7. Small Animal PET and SPECT for Basic Research and Drug Development	81
8. Computer-assisted Medical Imaging	92
9. Neurocomputers and ANNs for Image Interpretation	126
10. Nuclear Medicine in Neurology	135
11. Psychiatry: Linking Mind and Brain	167
12. Radioisotope Techniques in Endocrinology and Metabolism	181
13. Nuclear Medicine in Thyroid Disease	207
14. Insulin Resistance Syndrome/Metabolic Syndrome	225
15. Nuclear Cardiology	249
16. Radionuclides in Nephrourology	275
17. Radionuclide Lung Imaging	315
18. Radionuclide Studies of the Alimentary Tract	338
19. Radionuclide Liver Imaging	358
20. Radionuclides in Hematology	383
21. Nuclear Medicine in Orthopedics	392
22. Imaging Inflammation and Infection	431
23. Nuclear Medicine in Oncology	443
24. Radionuclide Therapy	462
25. Low Dose Radiation Effects and Radiation Protection	481
<i>Appendices</i>	493
