

CONTENTS

1. Cement and Tooth Colored Materials	1
2. Direct Filling Gold	4
3. Pain Control in Operative Procedures	24
4. Biomechanics of Cavity Preparation	28
4A. Brief Cavity Preparation	40
5. Porcelain Cavity Preparation	48
6. Selection of Restorative Materials	60
7. Restoration of Teeth with Silver Amalgam	66
8A. Comparison of Composites and Glass Ionomer	89
8B. Recent Advances in GIC and Composites	97
8C. Biologic Considerations in Restorative Procedures	103
9. Nomenclature	108
10. Instrument and Laser in Operative Dentistry	109
11. Biocompatibility of Dental Materials	115
12. Patient Assessment, Examination, Diagnosis and Treatment Planning	134
13. Pin-retained Restorations	146
14. Extracoronary Cast Metal Restorations	155
15. Isolation of the Operating Field	170
16. General Principles of Instrumentation	177
17. Differences between Primary and Permanent Dentition	180
18. Composites	189
19. Infection Control	213
20. Recent Concepts in Cavity Preparation	231
21A. Inlays and Onlays	235
21B. Contours and Contact	245
22. Silver Amalgam	247
23. Tooth Separation	257
24A. Dental Casting Alloys	260
24B. Dental Casting Procedures	275
25. Porcelain Material	284
26. Dentine Hypersensitivity	298
27. Non-cariogenic Hard Tissue Lesions	302
28A. Wedge and Instrument Grasp	326
28B. Matrices	328
29A. Management of Carious Lesion	333
29B. Management of Deep Carious Lesion	343
30. Speed in Dentistry	348
