

# Contents

## Section 1 • Basics of Genetics and Genetics Laboratory

- 1. Structure of DNA** 3  
*MS Ahuja*
  - DNA Packaging 3 • Forms of DNA 4 • Replication of DNA 4 • Ribonucleic Acid 5
  - Gene Structure 5 • Gene Expression 6 • Genetic Code 7
- 2. Chromosome Nomenclature and Cell Division** 10  
*Manisha Vajpayee*
  - Nomenclature 11 • Description of Human Chromosomes 13 • Karyotype Designation 13
  - Designation of Chromosomal Abnormalities 14
- 3. Microscopes in Assisted Reproductive Technology** 19  
*Rajvi H Mehta*
  - Important Terminology in Microscopy 19 • History of Microscopes 21
  - Basic Optical Principles of Light Microscopy 21 • Application of Microscopes in ART 26
  - Maintenance of Microscopes 27
- 4. The Cell Cycle and Cell Division** 28  
*Manisha Vajpayee*
  - Stages and Types of Cell Division 28 • Gametogenesis 31
- 5. Cell** 35  
*Kuldeep Mohanty, Swetasmita Mishra, Kranthi Vemprala, Tarranum Hassan, Rima Dada*
  - Types of Cells 35 • Structure 36 • Cell Division 41

## Section 2 • Investigative Cytogenetics

- 6. Cytogenetics** 47  
*Rima Dada, Manoj Kumar, Jhumur Pani, Dinesh Tomar*
  - History of Cytogenetics 47 • Cytogenetics: Principle and Methods 48 • Basics of Tissue Culture 51
  - Cytogenetic Analysis of Chromosomes 52 • Banding Techniques 54 • Specialized Techniques to Visualize Chromosomes 56 • Drawbacks of Karyotyping Techniques 57 • Molecular Cytogenetics 57
- 7. Polymerase Chain Reaction** 59  
*Rima Dada, Swetasmita Mishra, Kuldeep Mohanty, Manoj Kumar, Kranthi Vemprala*
  - Basic Principle 59 • PCR Methodology 60 • PCR Cycle 60 • Reagents and Instrumentation 61
  - Optimizing the PCR Reaction 63 • Fidelity of PCR Reaction 63 • Do Errors in PCR Matter 63
  - Types of PCR 63 • Drawbacks of Conventional PCR 65 • Quantitative PCR 65
  - Primer Modifications 67 • PCR Optimization 68 • Clinical Applications 69

- 8. Human Chromatin** **71**  
*Indu Chawla*
- Functions of Chromatin 71 • Structure of Human Chromatin 71
  - Chromatin Organization 71 • Types of Chromatin 72
- 9. Molecular Techniques in Preimplantation Genetic Diagnosis** **73**  
*Nikhil Moorchung*
- Structure of the Eukaryotic Chromosome 73 • Classification of Chromosomes 74
  - Visualizing Individual Chromosomes 74 • Chromosomal Abnormalities 75
  - Fluorescent *in situ* Hybridization 77 • Microarrays 79 • Comparative Genomic Hybridization 81 • Combining CGH with Microarrays: The Development of Array CGH 81
  - Whole Genome Amplification 83

### Section 3 • Applied Cytogenetics

- 10. DNA Fragmentation and Pregnancy Loss** **87**  
*Vijayakumar Chelur Narayanamurthy*
- Human Sperm Chromatin Structure 87 • Etiology: Origin of Sperm DNA Fragmentation 88 • Methods of Detection 88 • Ambiguity among the Methods of Detection 89 • Implications of DNA Fragmentation on Cycle Outcome 89 • Role of Sperm DNA Fragmentation on Pregnancy Loss 89
  - Future Prospects for Research 92
- 11. Cytogenetics of Infertile Women** **94**  
*Sarabpreet Singh*
- Female Infertility 94 • The X and Y Chromosomes 94
  - Structural Abnormalities of the X Chromosome 98
- 12. Cloning** **105**  
*Sarabpreet Singh*
- Background 105 • How is Cloning Different from Embryo Splitting? 106
  - Events in Cloned Embryos 106 • How is Somatic Cell Nuclear Transfer Different from Asexual Reproduction? 107 • Methods of Cloning 108
  - What We have Learned from Cloning? 108 • Genetic Reprogramming 108
  - Applications of Somatic Cell Nuclear Transfer 108 • Limitations of Somatic Cell Nuclear Transfer 109 • Advantages 109 • Concerns 110 • Effect of Cloning on Disruption of Human Lineage 110 • Cloning versus Assisted Reproduction Techniques 110 • Genealogical Bewilderment 111
- 13. Premature Ovarian Failure: A Chronic Debilitating Condition of Womanhood** **113**  
*GD Maiti*
- Epidemiology 113 • Etiopathogenesis 114 • Clinical Associations 115
  - Histological Evidence for Autoimmune Damage in POF 116 • Premature Ovarian Failure and Addison's Disease 116 • Nonovarian Autoantibodies 116
  - Ovarian Autoantibodies 116 • Immunogenetics in Premature Ovarian Failure 117
  - Clinical Presentation 119 • Differential Diagnoses 121 • Diagnostic Studies 121
  - Prognosis 122 • Treatment 123

---

<b>14. Genetics and Male Infertility</b>	<b>128</b>
<i>Prasad Lele</i>	
• Genetic or Molecular Causes of Male Infertility 128 • Chromosomal Abnormalities 128 • The Y Chromosome 129	
<b>15. Sperm DNA Damage Assessment: Techniques and Relevance in Male Infertility Diagnostics</b>	<b>135</b>
<i>Rima Dada, Kumar BS, Manoj Kumar, Ajit Singh Oberoi, Monis Bilal Shamsi</i>	
• Tests for Sperm DNA Damage Assessment 136 • Etiology of Sperm DNA Damage 139 • Outcomes of Studies on Sperm DNA Damage 139	
<b>16. Patterns of Inheritance</b>	<b>143</b>
<i>MS Ahuja</i>	
• Laws of Inheritance 144 • Mendelian Inheritance 144	
<b>17. Epigenetics</b>	<b>155</b>
<i>Prajnya Ranganath</i>	
• Epigenetic Mechanisms 155 • Role of Epigenetic Mechanisms in Development 156 • Environmental Influences on the Epigenome 157 • Effect of Assisted Reproductive Technology on the Epigenome 157 • Epigenetic Alterations in Human Disease 157 • Prospects for Epigenetic Therapy 159	
<b>18. Inborn Errors of Metabolism</b>	<b>160</b>
<i>Prajnya Ranganath</i>	
• Prevalence 160 • Classification of Inborn Errors of Metabolism 160 • Inheritance Patterns of Inborn Errors of Metabolism 160 • Clinical Manifestations 160 • Investigations 162 • Treatment 162 • Genetic Counseling 162 • Newborn Screening 162	
<b>19. Male Infertility and Cytogenetics</b>	<b>166</b>
<i>Kuldeep Jain, Rashmi Sharma</i>	
• Classification of Chromosomal Abnormalities 166 • Infertile Men with Normal Karyotype 168 • Clinical Implications 169	
<b>20. Cytogenetics in Recurrent Miscarriages</b>	<b>171</b>
<i>Kuldeep Jain, Rashmi Malik</i>	
• Definition of Recurrent Miscarriage—When to Investigate? 171 • Causes of Recurrent Miscarriage 171 • Role of Genetic Factors (Chromosomal Abnormalities) in Miscarriages 171 • Cytogenetic Studies in Couples with Recurrent Miscarriages 172 • Structural Chromosomal Abnormalities 172 • Sex Relation 173 • Past History 173 • Other Minor Chromosomal Rearrangements 173 • Numerical Aberrations in Parents 174 • Prognosis in Carriers of Balanced Translocations: Clinical Consequences 174 • Normal Pregnancy Outcome 174 • Risk of Fetal Structural Chromosomal Anomaly 175 • Risk of Miscarriage 175 • Preimplantation Genetic Diagnosis 175 • Gamete Donation and <i>in vitro</i> Fertilization 175 • Chromosomal Studies in the Miscarriage Samples 175 • Techniques for Cytogenetic Studies 176 • Recommendations for Cytogenetic Studies in Recurrent Miscarriages 178 • Cytogenetic Studies of Miscarriage and Selective Parental Studies 178	

- 21. Chromosomal Polymorphic Variants and Reproductive Outcome** **181**  
*Arun Arora, Geetu Mahajan*  
• Clinical Applications 182
- 22. Oocyte and Maternal Inheritance** **185**  
*Sohani Verma*  
• Oogenesis 185 • Oocyte Genome 185 • Nuclear Genome 185  
• Ooplasm and Mitochondrial DNA 187 • Energy Production in the Oocyte 187  
• Special Features of Mitochondrial Genetics 188 • Clinical Implications 189  
• Prenatal Diagnosis and Emerging Technologies 190

## Section 4 • Cytogenetics: Recent Advances

- 23. Cell Sorting in Genomics: Beginners' Guide** **195**  
*SR Das*  
• Fluorescence Activated Cell Sorting 195 • Flow Cytometer Principles 196  
• Fluorescence 196 • Optics and Data Collection 196 • Sorting 197
- 24. Gene Therapy** **198**  
*Krishan Chugh, Neetu Talwar*  
• History 198 • Concept of Gene Therapy 198 • How does it Work? 198  
• Types of Gene Therapy 199 • Different Approaches to the Treatment by  
Gene Therapy 200 • Choosing Targets 200 • Gene Delivery 200  
• New Approaches 204 • Correct Approach in the Cases of Dominant,  
Negative, Mutated Genes 204 • Issues in Gene Therapy 204 • Research to  
Trials 205 • Challenges in Gene Therapy 205 • Preventive Gene Therapy 205  
• Genetic Consultation 206 • Prognosis 206 • Future of Gene Therapy:  
Can we have Designer Babies? 206
- 25. Recombinant DNA Technology** **209**  
*Jairam Yadav*  
• Uses for Recombinant Molecules 209 • Formation of Recombinant DNA 210  
• Future Applications of Genetic Technologies in Treatments for Infertility 218
- 26. Blot Tests** **219**  
*Surveen Ghumman Sindhu, Monika Gupta*  
• Southern Blot 220 • Northern Blotting 220 • Western Blotting 221  
• Eastern Blotting 221 • Southwestern Blotting 222
- 27. Whole Genome Amplification and CGH: Recent Molecular Biology  
Techniques in Cytogenetics** **223**  
*Raman Agrawal*  
• Whole Genome Amplification 224 • Comparative Genomic Hybridization 226
- 28. Soluble Human Leukocyte Antigen-G: Embryology in the Era of Proteomics** **230**  
*Natachandra Chimote, Bindu Mehta, Nishad Chimote*  
• Proteomics and the Embryo 230

- 29. Role of Centrosome in Fertilization and Beyond in Assisted Reproduction** **238**  
*Natachandra Chimote, Bindu Mehta, Nishad Chimote*
- Fertilization and Early Embryogenesis 238
  - Sperm and Oocyte Contributions 238
  - Sperm Centrosome: Composition and Function 239
  - Cytoskeletal Events during Fertilization 240
  - Role of Centrosome Proteins in Fertilization 241
  - When Fertilization Fails 242
  - ICSI and Assays for Centrosome Functions in ART 243
  - Conclusions and Future Perspectives 244
- 30. Human Genome Project** **248**  
*Neetu Talwar, Krishan Chugh*
- General Organization of the Human Genome 249
  - DNA Sequencing 250
  - Human Genome Project 252
  - Who else is Involved with the Human Genome Project and Human Genome Research? 253
  - Impact of Human Genome Project on Science, Genetics and Research 253

## Section 5 • Preimplantation Cytogenetics

- 31. Preimplantation Genetic Diagnosis: A Review** **259**  
*Pankaj Talwar*
- Indications for Preimplantation Testing 259
  - Techniques of PGS/PGD 260
  - Timing of Biopsy 261
  - Biopsy Procedure and Cell Extraction 261
  - Number of Cells to Remove Safely 261
  - Molecular Biology Techniques as Applied to PGD and PGS 261
  - Basic Principles of PGD 262
  - The Future: Toward a Full Chromosome Count 264
  - Counseling the Couple for Preimplantation Genetic Testing 264
  - Ethical Considerations 264
- 32. Preimplantation Genetic Diagnosis in Assisted Reproductive Technology** **266**  
*Sujatha R, Ashraf CM*
- Preimplantation Genetic Diagnosis and Preimplantation Genetic Screening 266
  - Indications for PGS and PGD 267
  - Molecular Diagnostic Techniques 267
  - Samples for PGD 269
  - Outcome 271

## Section 6 • Prenatal Cytogenetics: Clinical Applications

- 33. Prenatal Cytogenetics** **277**  
*Leena Wadhwa, Apoorva Kulshreshtha*
- Indications 278
  - Methods of Prenatal Cytogenetics 278
  - Diagnostic Problems in Prenatal Diagnosis 282
- 34. Prenatal Diagnosis of Down Syndrome and other Chromosomal Disorders and Counseling for Abnormal Serum Marker Analytes** **284**  
*Yoginder Singh*
- Second-Trimester Serum Screening 285
  - First-Trimester Combined Screen (Biochemical and Ultrasound) 285
  - Combined First-Trimester and Second-Trimester Screening 286
  - First-Trimester Ultrasound for Aneuploidy 287
  - Noninvasive Prenatal Diagnosis 287
  - Recommendations in Abnormal Serum Analytes 287

**35. Common Genetic Syndromes in Clinical Practice** **289**

*Sheila S Mathai*

- Causes of Genetic Disorders 289 • Modes of Inheritance 290
- Incidence of Genetic Disorders in India 291 • Clinical Terminologies 292
- Risks of Recurrence 292 • Common Chromosomal Anomalies 293
- Common Single Gene Defects 295 • Newborn Screening 297

**36. Assisted Reproductive Technology and Genetic Counseling** **298**

*Koumudi Godbole*

- Genetic Counseling 298 • Definition 298 • Process 298 • Providers 299
- Genetic Counseling in ART: Discussion Points 299 • Genetic Counseling: Specific Issues 299 • Genetic Counseling: General Issues 303 • Preimplantation Genetic Diagnosis 303 • Role of Maternal Aneuploidy Screening in Pregnancies Conceived by ART 304 • Newer ART Procedures and Genetic-Epigenetic Concerns 305
- Pregnancy Complications with ART 306
