

Contents

Section 1 Shock and Its Management

- 1. How I Approach a Patient in Shock? 3**
Jean-Louis Vincent
 - Clinical Assessment and Diagnosis 3
 - Patient Management 4
- 2. Assessment of Fluid Responsiveness in Shock State 8**
Xavier Monnet, Kishore Mangal, Sathyamuthi G
 - Static Indices of Cardiac Preload 8
 - Fluid Challenge 9
 - Pulse Pressure Variation, Stroke Volume Variation 10
 - Variability of the Diameter of Vena Cava 12
 - Respiratory Occlusion Tests 14
 - Passive Leg Raising 15
- 3. Peripheral Circulation in the Critically Ill 21**
Suhail S Siddiqui, Jan Bakker
 - Capillary Refill Time 21
 - Skin Mottling 22
 - Temperature Gradients 22
 - Peripheral Perfusion Index 23
 - Tissue Oxygen Saturation 23
- 4. Choice of Fluids in Shock Resuscitation 26**
Suresh Ramasubban
 - History of Intravenous Fluid Development 26
 - Physiological Basis for Choice of Fluids for Resuscitation 29
 - Resuscitation Fluids 29
- 5. Vasopressors in Septic Shock: Why, When, Which One, How Much? 33**
Jean-Louis Teboul, Kavita Ramesh, Prashant Walse
 - Why Do We Need and When Should We Initiate Vasopressors? 33
 - Norepinephrine 34
 - Vasopressin 36
- 6. Basic and Advanced Hemodynamic Monitoring in Cardiogenic Shock 39**
Iwan CC van der Horst, Subhra Sen, Thomas WL Scheeren
 - Diagnostic Value of Monitoring 39

7. Management of Cardiogenic Shock	44
<i>Yatin Mehta, Dheeraj Arora, Ajmer Singh</i>	
▪ Medical Management	46
▪ Reperfusion and Revascularization	48
▪ Mechanical Circulatory Support (MCS)	49
8. Understanding Heart-Lung Interactions during Mechanical Ventilation	52
<i>Jacob George P, JV Divatia</i>	
▪ Effects of Changes in Intrathoracic Pressure	52
▪ Cardiovascular Effects of Increase in Lung Volume	54
▪ Ventricular Interdependence	55
▪ Clinical Application of Heart–Lung Interactions	57
▪ Use of Heart–Lung Interactions	57
9. Practical Use of Inotropes in Intensive Care Unit	61
<i>Sameer Jog</i>	
▪ Physiology of Inotropes	61
▪ Pharmacology	62
▪ Use of Inotropes in Critical Care Set-up	63
10. Hypovolemic Shock: “Cold” or “Hot” Shock	69
<i>Khusrav Bajan</i>	
▪ Shock	69
11. Obstructive Shock	77
<i>Kayanoosh J Kadapatti, Aparna G Kulkarni, Anjana Gopinath</i>	
▪ Symptoms and Signs of Obstructive Shock	77
▪ Pathophysiology	77
▪ Management of Obstructive Shock	77
▪ Pulmonary Thromboembolism	78
▪ Cardiac Tamponade	80
▪ Tension Pneumothorax	82
▪ Other Less Important Causes of Obstructive Shock	83
12. Understanding and Managing RV Dysfunction	84
<i>Sunil Karanth</i>	
▪ Epidemiology	85
▪ Pathophysiology of Acute RV Failure and Dysfunction	85
▪ Pathogenesis of Acute RV Dysfunction and Failure	85
▪ Clinical Features and Diagnosis of RV Failure	86
▪ Treatment	87

13. Early Goal-directed Therapy: Current Status	91
<i>Mohd Saif Khan, Sheila Nainan Myatra</i>	
▪ Background	91
▪ Hemodynamic Derangements in Sepsis and Septic Shock	91
▪ Rationale for using EGDT	92
▪ EGDT Protocol (Rivers Study)	92
14. Understanding and Interpreting Lactate, ScVO₂ and VApCO₂ Gap in Management of Shock	97
<i>Sameer Jog, Kiran Sheshadri, Prasanna Marudkar</i>	
▪ Understanding Lactates in Shock	97
▪ Interpreting ScVO ₂ in Shock	99
▪ Venous-arterial CO ₂ Difference (VApCO ₂ GAP)	101

Section 2 Basic Hemodynamic Monitoring

15. Understanding the Transducer Assembly for Invasive Pressure Monitoring	105
<i>Atul P Kulkarni, Suhail S Siddiqui, Syed Nabeel Muzaffar</i>	
▪ Transducer	105
▪ Common Sources of Error and Complications	109
▪ Transducer Development	109
16. CVP Monitoring: To use or not to use, that is the Question?	111
<i>Didier Payen, Carol D'silva</i>	
▪ Determinants of CVP	112
▪ Interpretation of CVP Value	115
▪ Understanding CVP and its Use in Today's Scenario	117
17. Techniques of Inserting Central and Arterial Lines	121
<i>Jyoti Shendge, Milan C Patel, Niraj Shah</i>	
▪ Stepwise Approach to Insertion of Central Lines	122
▪ Techniques for Specific Veins	126
18. Central Venous Pressure Waveforms: Tale-tellers in Physiology!	129
<i>Chandrashish Chakravarty</i>	
19. Understanding and Interpreting the Arterial Waveform	132
<i>Bhuvana Krishna</i>	
▪ Historical Perspective	132
▪ Terminology	133
▪ Physiological Principles Necessary in Understanding the Arterial Waveform	133

- Arterial Waveform 139
- Differences in Waveform Between Central and Peripheral Arteries 144
- Arterial Waveform in Some Diseases 144

20. USG-guided Central Line Insertions 147

Sandesh Kumar KJ, Deepak Govil

- Procedure 147
- Location 147
- Preparation 148
- Catheter Types 148
- Asepsis 148
- One Person Versus Two Person Technique 148
- Site 148
- Peripheral Inserted Central Catheter Line 153
- Seldinger's and Modified Seldinger's Technique 153
- Postinsertion 154
- Handling of Catheters 154

21. Echocardiography: The Basics an Intensivist Must Know—and a Little More 156

Vivek Kumar, Srinivasan Ramanathan

- Basic Views 157
- Critical Care Echocardiography 158
- Report Interpretation 165
- Inferences 167
- Appendix "A": Suggested Performa 171

22. Application of Echocardiography as Hemodynamic Monitoring Tool 173

Jitendra Choudhary, Rahul Pandit

- Indications of Echocardiography 173
- Preload (Intravascular Volume) Assessment 174
- Right Ventricular Assessment 177
- Stroke Volume, Cardiac Output, and SVR Calculations 178
- Pericardial Effusion and Tamponade 179

23. Use of Pulmonary Artery Catheter in Today's ICUS 180

Simran Singh

- Hemodynamic Profiles of Various Shock States 180
- Measured Hemodynamic Parameters 183
- Respiratory Influence on Hemodynamic Waveform 187
- Lung Zones 187
- Measurement of Cardiac Output Using Pulmonary Artery Catheter 188
- Derived Hemodynamic Parameters 191
- Complications of Pulmonary Artery Catheter 192

24. Application of NT-proBNP, Troponin, Procalcitonin and D-dimer in Hemodynamic Insufficiency 194

Sunitha Binu Varghese, Khalid Ismail Khatib

- Procalcitonin 194
- NT-proBNP (N-terminal Pro Brain Natriuretic Peptide) and BNP (B Type Natriuretic Peptide) 195
- D-dimer 197
- Troponins 198
- Indications 198

Section 3 Advanced Hemodynamic Monitoring

25. Usefulness and Pitfalls in Advanced Hemodynamic Monitoring Tools 203

E Christiaan Boerma, Sai Saran PV, Pralay Ghosh

26. Cardiac Output Devices: Which One is Good for my ICU? 210

Maurizio Cecconi, Urvil Patwa, Antonio Messina

- Calibrated Pulse Contour Analysis Devices 210
- Uncalibrated Pulse Contour Analysis 212
- Cardiac Echography and Doppler Signal 212

27. Understanding and Application of Transpulmonary Thermodilution Techniques (PiCCO and EV100) 216

Vijaya Patil

- History of Measurement of Cardiac Output 216
- Dye Dilution: The Basic Principle 217
- Transpulmonary Thermodilution 217
- Use of TPTD Monitor in Patients with Low Tidal Volume Ventilation or Spontaneously Breathing Patients 223
- Balancing Fluid Management in Patients with Shock and High EVLW 224

Section 4 Managing Practical Issues at the Bedside

28. Multimodal and Individualized Hemodynamic Support at the Bedside 229

Zsolt Molnár, Nándor Öveges

- Case Report 229

29. Perioperative Hemodynamic Monitoring in High-risk Cardiac Patients 236

Bande BD, Leena Jalota

- Heart Rate 237
- Arterial Pressure 237

- Central Venous Pressure 237
- Transthoracic and Transesophageal Two-Dimensional Echocardiography 238
- Cardiac Output Monitoring 238
- Cardiac Output Monitoring by Other Methods 238
- Clinical Applications of Various Hemodynamic Parameters 242
- Optimization Strategies 243
- Perioperative Fluid Management 244

30. Managing Hypertensive Emergencies and Crisis 247

Jignesh N Shah, Prashant P Jedge

- Understanding Terms 247
- Pathophysiology 247
- Presentation 249
- Evaluation 249
- Investigations 250
- Management 250
- Choice of Drug 252

31. Preventing Central Line-associated Blood Stream Infection 254

Ranjeet Patil

- Central Line Associated Blood Stream Infection (CLABSI) versus Catheter Related Blood Stream Infections (CRBSI) 254
- When to Suspect CRBSI? 254
- Diagnosis 255
- Antibiotic Lock Therapy 259

32. How do I Integrate all Hemodynamic Variables and Take Decision? 261

Daniel De Backer, Natesh Prabu R

- Hemodynamic Monitoring Tools Commonly Used at Bedside 261
- Case Vignette 267
